Service Methodology

Our approach ensures high-fidelity data extraction from complex real estate portals. We utilize stealth browsing to bypass anti-scraping measures while maintaining data integrity.

1. Target Identification: Mapping dynamic elements and pagination.
2. Data Parsing: Extracting structured attributes (Price, Area, Amenities, Location).
3. Validation: Automated cleaning of null values and inconsistent formatting.
4. Delivery: Providing clean, ready-to-use JSON/CSV files for your CRM or analytics engine.

Sample Data Output

Property ID	Location	Price	Area (m2)	Type	Status
RE-9921	Palermo, BA	\$250,000	85	Apartment	Active
RE-4432	Recoleta, BA	\$410,000	120	Penthouse	Pending
RE-1029	Belgrano, BA	\$180,000	60	Studio	Active
RE-8872	Puerto Madero	\$650,000	150	Loft	Sold

Next Steps

1. Define Target URLs: Provide the list of portals or specific regions.
2. Scope Definition: Confirm specific fields required for your analysis.
3. Pilot Run: We will deliver a sample of 100 records for quality verification.
4. Full Scale Deployment: Automated daily/weekly updates to your preferred destination.
